# CUBITRON™ II

## Cuts 30% Faster. Lasts Twice As Long.

3M™ Cubitron™ II 150mm Discs are a revolutionary advancement in automotive abrasive technology featuring triangular shaped ceramic mineral. As the triangular shaped grain wears, it continually fractures to form sharp points that slice through the substrate, wear evenly and provide extra-long life and consistency.

- Cuts 30% faster than premium abrasives
- Lasts up to twice as long
- Delivers finer, more uniform finish
- Requires less pressure

3M Precision Shaped Grain

3M precision shaped grain in Cubitron™ II 150mm Discs continuously fractures to form sharp points and edges — slicing cleaner and faster, staying cooler and lasting many times longer.

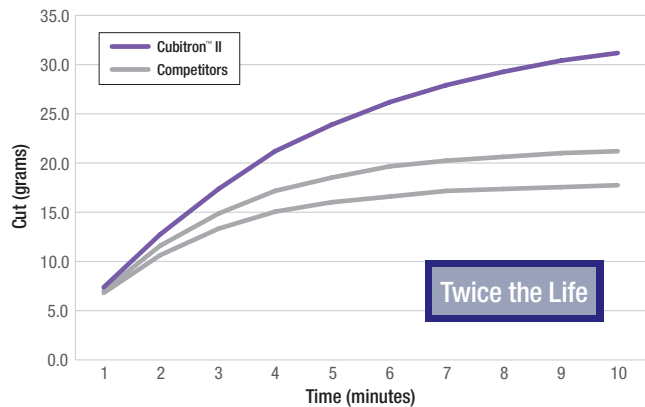

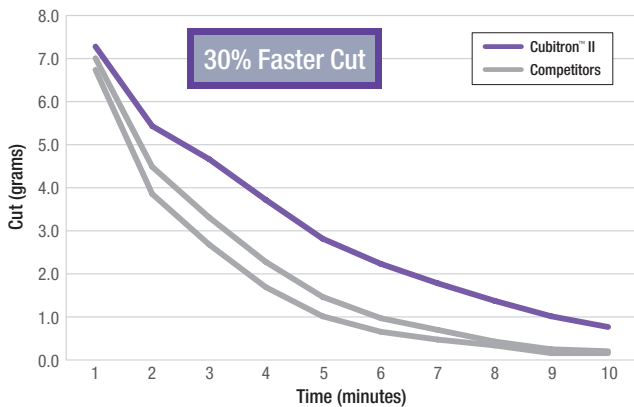

VS.

Conventional Grain

Conventional ceramic abrasive grain is irregular in shape. Instead of a clean, machining action, the grain “plows” through the metal, causing heat build up, slower cutting and shorter life.
